Profile

Fullstack Developer Jr with experience building complete web applications, including responsive interfaces, REST API consumption and development, and database management. I have worked with technologies such as JavaScript, Node.js, MySQL, and Docker, delivering solutions focused on user experience and performance. I am looking to join a development team where I can contribute value and continue growing professionally.

Education

Universidad Nacional Autónoma de México
Computer Engineering — School of Engineering

Mexico City
2021 – 2025

Experience

iOS Development Lab — School of Engineering
Social Service — Software Development

Mexico City
August 2024 – August 2025

- Initiated the development of a digital system for equipment inventory and loan management, streamlining manual processes and improving the lab's operational efficiency.
- Participated in local hackathons, collaborating in multidisciplinary teams to build functional solutions under pressure and tight time constraints.

Projects

Checkpoint — Social Network for Gamers

April 2026

- Designed and implemented 8 functional modules in a SPA using Next.js App Router.
- Integrated 2 external APIs (RAWG and RSS) for a game catalog and gaming news feed, reducing manually maintained content to **0**.
- Deployed the application on Vercel achieving an initial load time of **under 1.5 s** through selective SSR/SSG.

SIGEP — iOS Lab Management System

Feb 2026 – Mar 2026

- Reduced loan registration time from 3 minutes to under **30 seconds** (**−90%**) by replacing paper forms with a digital workflow featuring automatic validations.
- Eliminated the bottleneck of a single shared device, enabling simultaneous requests from any browser.
- Built a REST API with over **20 endpoints** for full inventory CRUD with authentication and secure session handling.

HorarioFI — Real-Time Schedule Planner

January 2026

- Reduced schedule planning time from 10 minutes to under **2 minutes** (**−80%**) by displaying real-time group availability.
- Prevented **100%** of scheduling conflicts through real-time validations before confirming any enrollment.

Skills

Technical: React, Next.js, Node.js, JavaScript, PHP, Python, Java, MySQL, PostgreSQL, Docker, Git, Vercel

Soft Skills: Self-directed learning, problem solving, teamwork, attention to detail, adaptability, time management

Languages: Spanish (native), English (intermediate – B2)
